

Introduction to hearing & speech science

Dr/Amany Hussein

MSc. In phoniatics

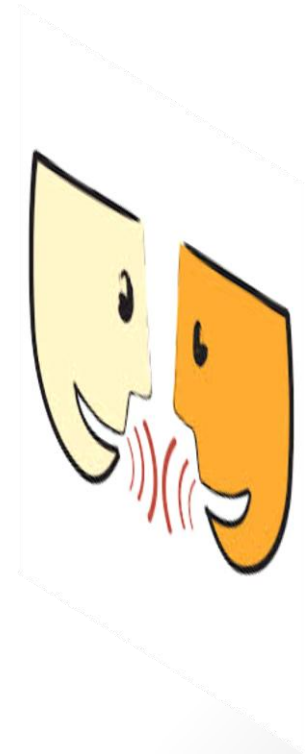

WHAT IS COMMUNICATION?

SOCIOLINGUISTICS

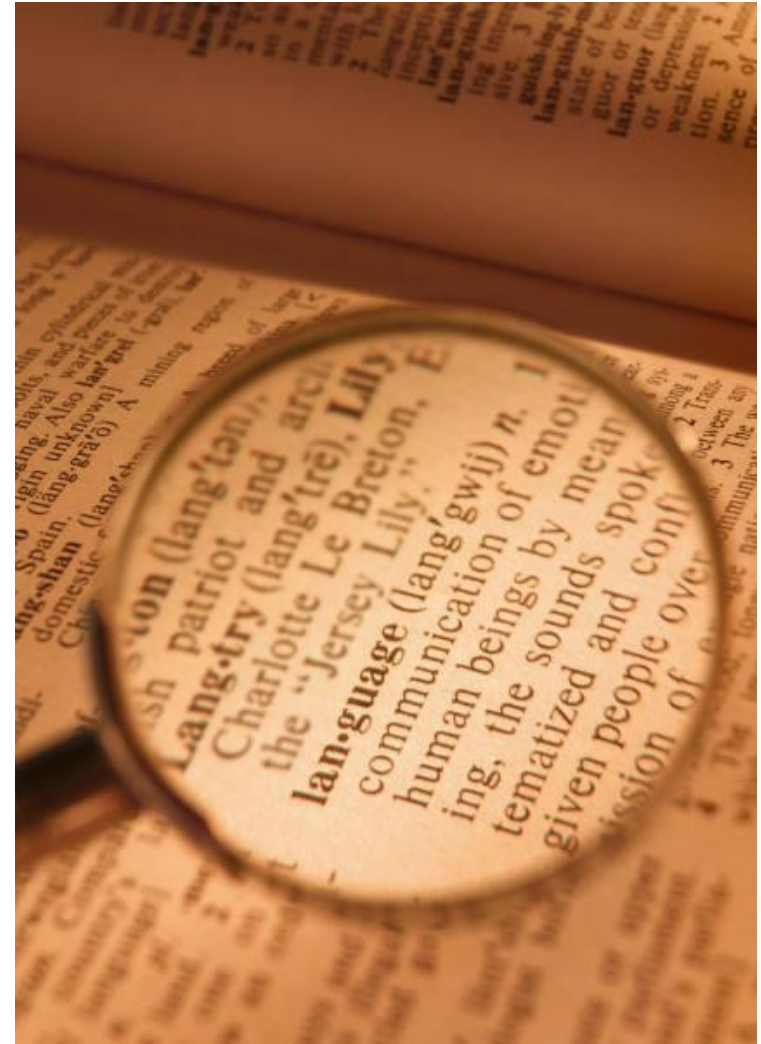

- Variables affect communication and its success or failure :
- Includes:
 - ✓ Cultural identity.
 - ✓ Setting.
 - ✓ Participants.

MEANS OF COMMUNICATION

• Language is...

- An arbitrary set of sounds and signs that have meaning in social settings

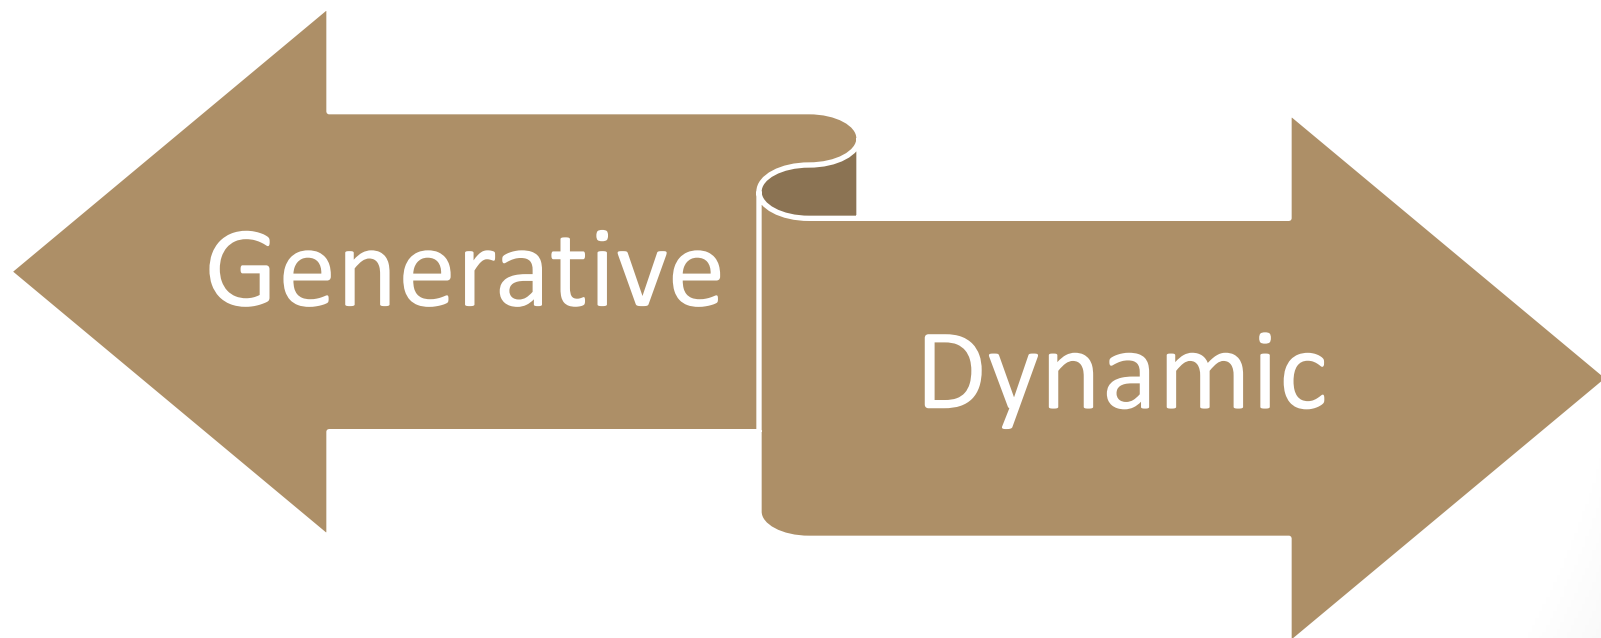

- *Characteristics of language are:*

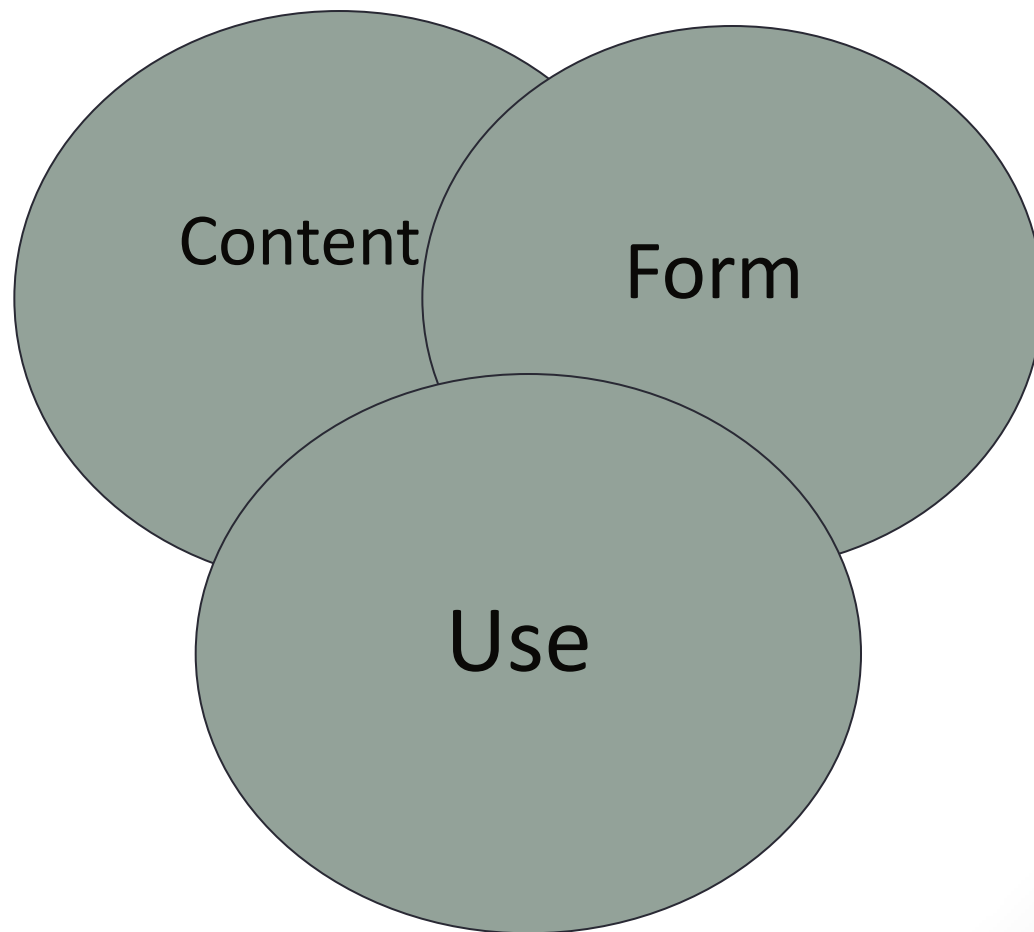

.....

.....

.....

.....

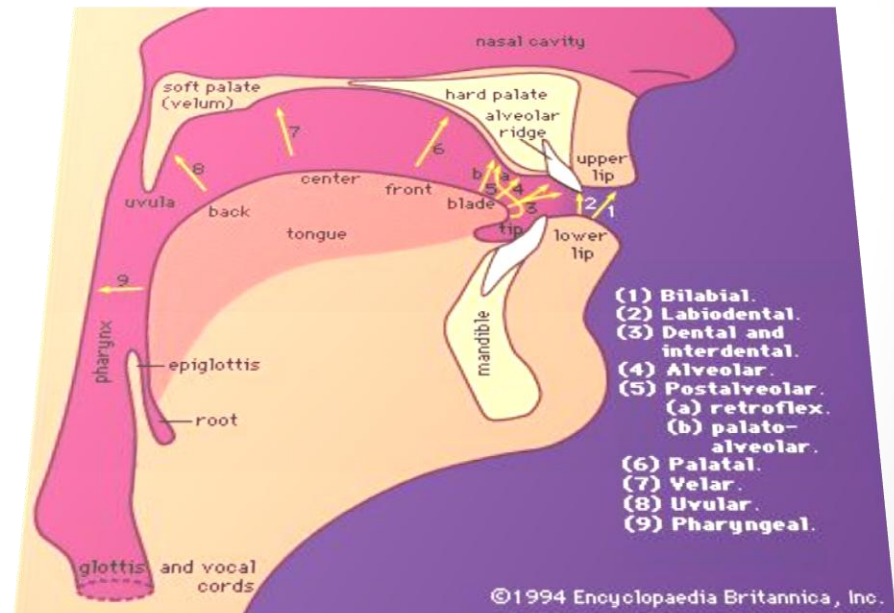

Phonotactics

- **Rules specify how sounds are arranged.**

Articulation :

The way speech sounds are formed.

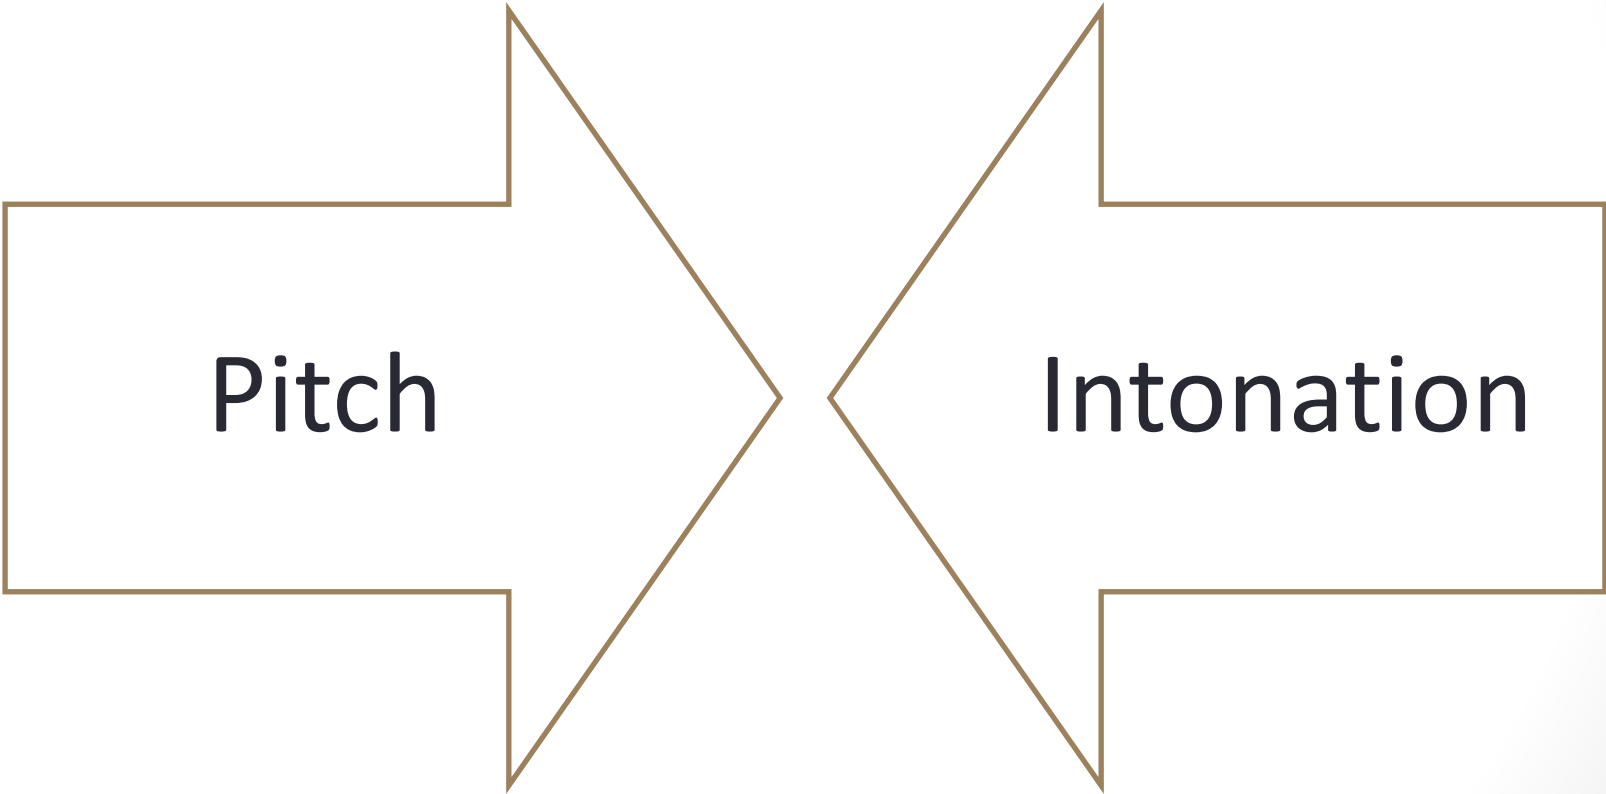

Fluency

- Smooth forward flow of communication , it is influenced by rhythm and rate of speech.

WHAT IS RATE?

Voice:

- Is the production of sound without linguistic content.
- It is the sound we make as air from our lungs is pushed between vocal folds in our larynx, causing them to vibrate.

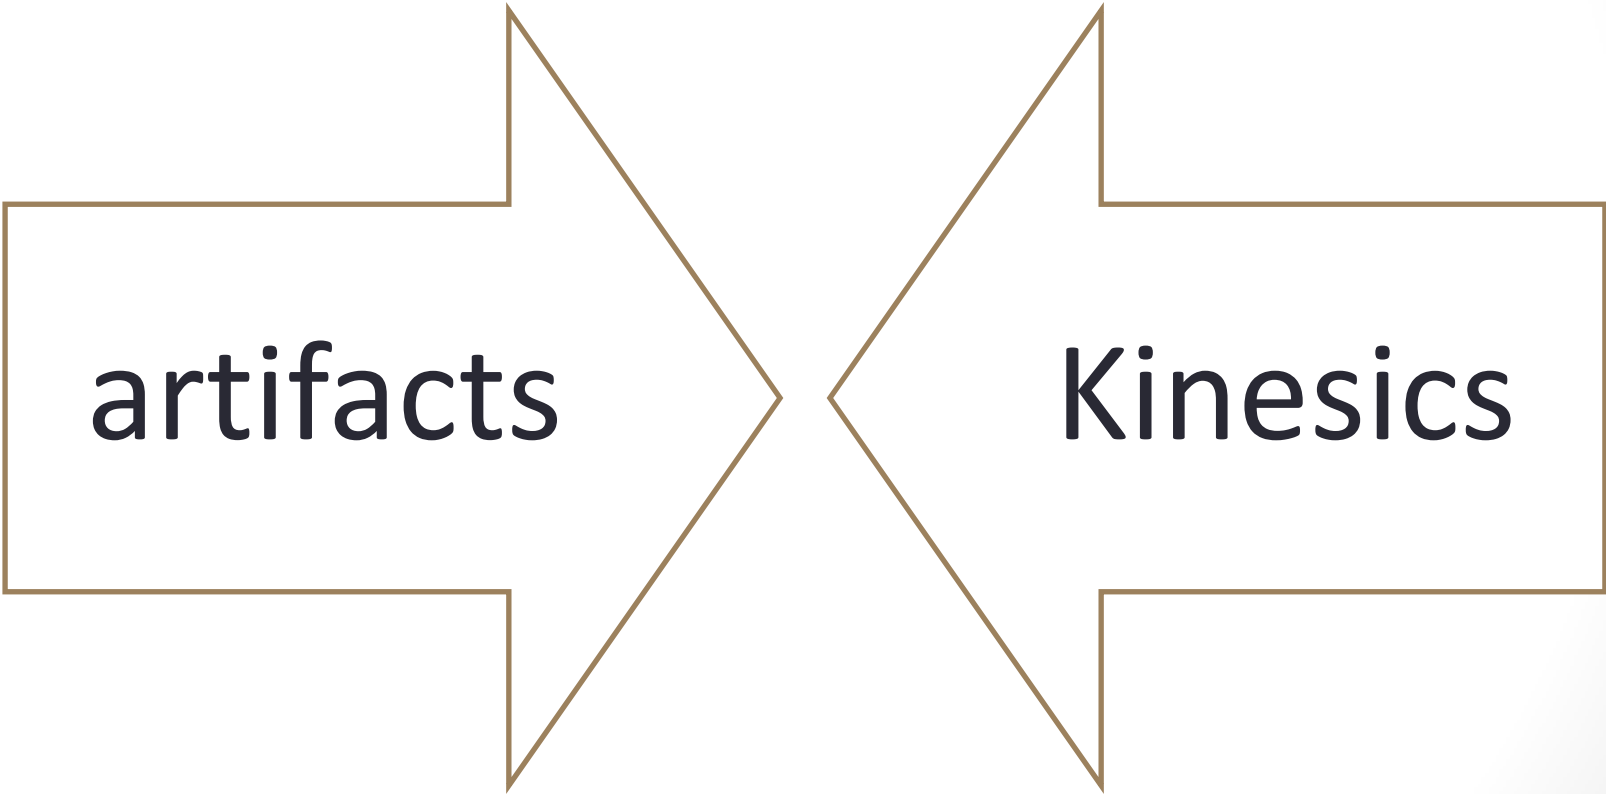

Pitch

The diagram consists of two interlocking shapes that resemble a double-headed arrow or two halves of a coin. The left shape is a rectangle with a triangular point on its right side, and the right shape is a rectangle with a triangular point on its left side. They meet at a central point. The word 'Pitch' is centered in the left shape, and 'Intonation' is centered in the right shape. The shapes are outlined in a thin brown line.

Intonation

The diagram consists of two large, stylized arrows pointing towards each other, meeting at a central point. The left arrow is white with a brown outline and contains the word 'artifacts'. The right arrow is also white with a brown outline and contains the word 'Kinesics'. The background is a light gray gradient, and there is a vertical orange bar on the right side of the image.

artifacts

Kinesics

Important terminologies

➤ **Proxemics :**

The study of physical distance between people as it affects communication (space & time).

➤ **tactiles**

➤ **chronemics :**

Effect of time on communication.

Communication impairment

Classifications

Reception

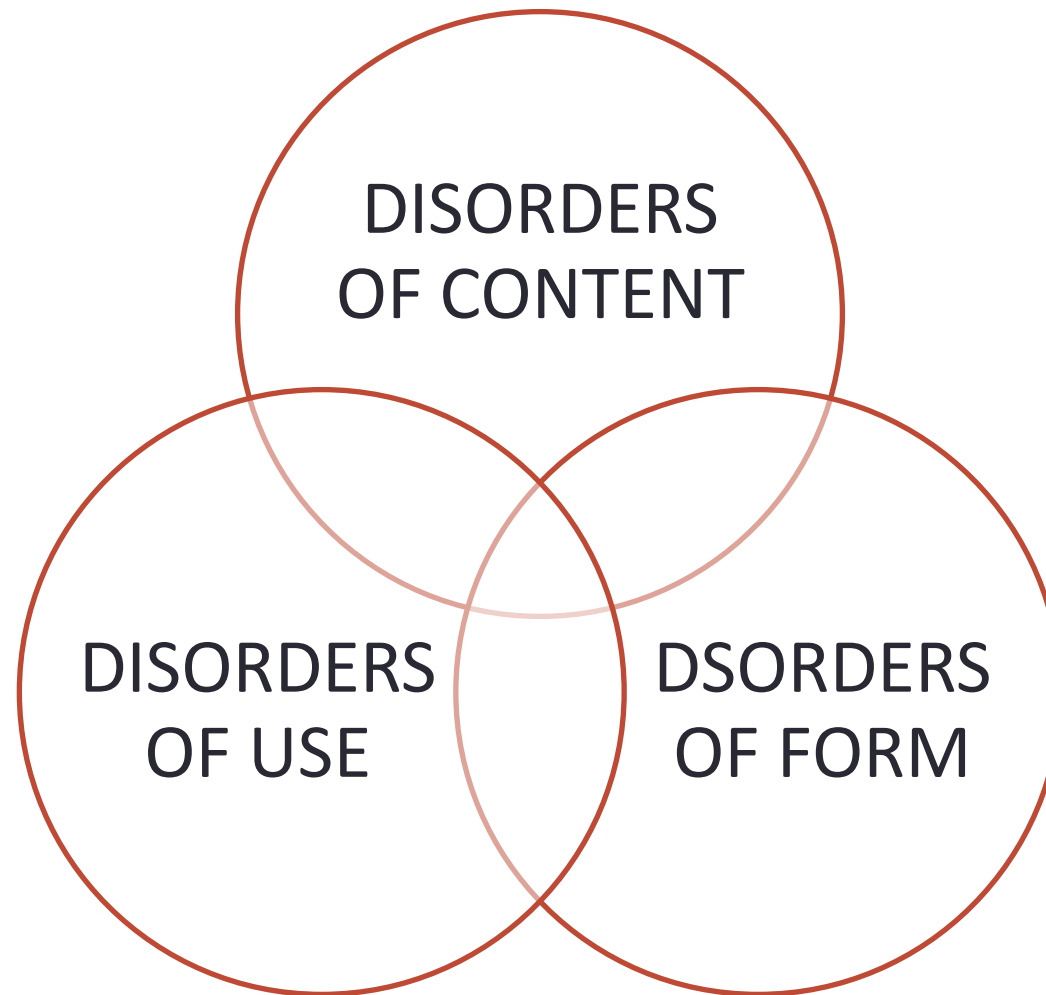

EXPRESSION

ETIOLOGY

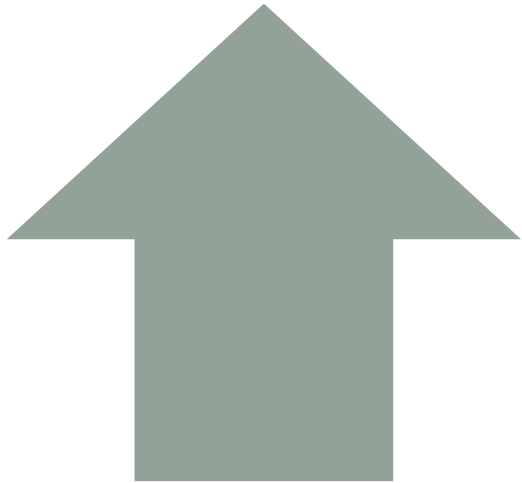

**TIME OF
ONSET**

HEARING DISORDERS

- **DEAFNESS .**
- **HARD OF HEARING .**
- **CAPD.**

How common are communication disorders?

- most communication disorders are 2ry to other disabilities.
- Impairments of speech sound productions and fluency are common in children than adults.
- Speech disorders due to neurological disorders occur more often among adults.

Assessment

1. Does a communication problem exist?
2. What is the diagnosis?
3. What are deficit areas?
4. What are patient's strengths?
5. How severe is the problem?
6. What are probable causes of the problem?
7. What recommendations should be made?
8. What is the prognosis?

Assessment procedures

- Case history.
- Questionnaires
- interviews.
- Systemic observation of the client's communication.
- Testing.
- Dynamic assessment.
- Communication sampling and analysis.

Interventions

- Improvement must be showed in settings and real environment.
- automatic.
- Self monitor.
- Progress in minimum time of time.
- Sensitive to personal & cultural characteristics of the patient.

Clinical elements

- Direct teaching.
- Incidental teaching.
- Counselling.
- Family involvement.
- Measuring effectiveness.
- Follow up and maintenance .
